Climate First Agri Companies in India

Published on August 5, 2023

Climate change has emerged as one of the most pressing global challenges of our time, with significant implications for the agriculture sector. In India, where agriculture plays a vital role in our economy and the sustenance of millions of people, the need for climate-friendly agricultural practices has become increasingly important. Fortunately, several agri companies in India have recognized this urgency and are pioneering sustainable approaches to farming. These climate-first agri companies prioritize environmental sustainability, resilience, and adaptation to climate change, while also striving to improve farmer livelihoods and food security. Through innovative technologies, precision agriculture, and eco-friendly solutions, these companies are leading the way in building a more sustainable and climate-resilient agricultural sector in India. In this report, we will explore some of the notable climate-first agri companies in India and their contributions towards sustainable agriculture and climate change mitigation.

Unnati:-

Unnati, conceptualized and co-founded by Mr Amit Sinha & Mr Ashok Prasad, is a fintech based Agri platform which aims to minimize the risks in farming and ensure much-needed transparency in the farming business. Unnati's founders recognised the difficulties farmers experience as a result of farming's lack of predictability and regular access to production inputs and information. Unnati aims to focus on sustainable and climate-ready products,

SLCM:-

Climate change presents a pressing challenge in today's world, with agriculture being a significant contributor to greenhouse gas emissions due to increased food demand from population growth. SLCM, founded by Mr. Sandeep Sabharwal in 2009, a leading organization in agriculture, understands the need to adopt environmentally friendly practices, evident in initiatives like Agri Suraksha and solar cameras, which have resulted in an annual reduction of 72 tons of CO₂ emissions. They remain dedicated to taking additional steps to safeguard agricultural produce and promote sustainability.

Aquaconnect:-

Aquaconnect is a full-stack aquaculture platform with embedded fintech that uses Satellite remote sensing and Artificial Intelligence to enable aquaculture farmers, retailers, and seafood buyers to increase access to farm inputs and post-harvest market linkage. Our unique tech solutions supercharge the entire aquaculture value chain and help build predictability and transparency into the value chain thereby making it efficient. Aquaconnect leverages AI and satellite remote sensing to build a climate tech platform to drive decarbonization in the seafood value chain.
