The first patent of Agri Reach Application was granted in 2022, “Method for Real-time Data Management” which had defined centralized processes for monitoring and managing crops from any location, whilst this second patent specifically addresses the process of monitoring the quality of the crops stored in a warehouse. With these two patents, **SLCM Group** offers a range of solutions for holistically managing both the quality and quantity of crops in real time under a single platform.

[ecosystem](#) self-reliant by bolstering diverse post-harvest facets, including an instant and accurate [quality monitoring](#) of food grains, tracking the entire journey of a commodity and real-time intimation on damage, wastage or deterioration of quality of the agri commodity to [warehouse operators](#) for faster action and result oriented information.

SLCM has been overseeing Asset Under Management (AUM) worth Rs 10,928.82 crore in FY24 and has a network of 16,877 [warehouses](#) and 36 cold storages across India and Myanmar.

The latest patented method represents a major advancement in sustainable technology and numerous benefits for the agriculture & allied community, offering accuracy of inbound and outbound transactions of commodity, streamlined data management processes by enabling a systemized and transparent process for quality control check of commodities at all junctures of warehouse management.

Commenting on strengthening SLCM IP portfolio, Sandeep Sabharwal, CEO of [SLCM Group](#) said “Both the patented inventions in a single platform of Agri Reach contains everything you need to effectively track commodity journey and syncing all data from numerous warehouse sites at the centralized location ensuring no gaps in the warehouse management process which may lead to deterioration of commodities. Warehouse operators are empowered to optimize quality control procedures and equip stakeholders with improved decision-making capabilities by having continuous access to the lifecycle of crops stored in the warehouse. Thereby, fostering sustainable development by curbing huge food grain losses during post-harvest stages”.
